

Overview

Needy Streamer Overload is a multi-ending management simulation ADV. The player is P-chan, both the boyfriend and manager of a rookie female online streamer Ame-chan, helping her make important daily decisions to ensure that her account KAngel can reach one million followers within a month, while prevent any mental disorder from happening on her.

Fragmented Narrative

The story is told in a fragmentary way: DMs, stream logs, chat reactions, public/private posts, anonymous forums, and trending noise. Put the spotlight only on Ame-chan, the irreplaceable core of the narrative, and build up her character arc with thoughtful details through the intimate simulation of an actual relationship between player and Ame. Will you pretend to love her like in reality, or just treat it as a bunch of 0s and 1s?

NEEDY STREAMER OVERLOAD

NARRATIVE REVIEW

Ending-Driven Kaleidoscope

The strongest emotional impacts are reserved for the various endings. With 22+ outcomes, the potential futures of Ame are exhibited in front of players like an unpredictable kaleidoscope, and no matter how bizarre they are, highlight the narrative core of the story through different angles - an aggressive dissection of modern sub-culture internet environment, a reflection on capitalism, mental illness, dependency, digital success, and toxic love.
